

FANS OF THE PLANET GREENDROP RECYCLING STATION

The Perfect Assist For
Your Composting &
Recycling Program.

GreenDrop Recycling Stations Reduces Landfill Contributions through guests pre-sorting compostable and recyclable waste.

The unique GreenDrop Recycling Station was designed through the efforts of the Portland Trail Blazer Head Office to reduce their environmental footprint while minimizing expenses and being fiscally responsible through sustainable operations. Extensive research, including a university study, took place in developing the GreenDrop Stations by observing public habits and interaction to various recycling configurations. The result was an ADA conforming, four compartment unit made of recycled plastic that allows guests to send food, drinks and compostable plates, cups and utensils to a composter

instead of a landfill, while separating recyclable items as well.

In 2010, The Rose Garden earned a LEED Gold rating for existing buildings from the U.S. Green Building Council who identifies and rewards best practices for a building's energy, water and natural resource performance. An integral part of the certification was their composting and recycling program. The Rose Garden arena increased its "diversion rate" -- the amount of waste recycled or composted -- from 38 percent in 2007 to 80 percent in 2010, in part by replacing garbage cans with GreenDrop Recycling Stations.

Diverted materials often cost half as much to dispose of as garbage.

Advertising Revenue Bonus

An additional payoff was achieved with the GreenDrop Recycling Stations. They have opened up an additional advertising avenue that appeals to a supplementary segment of advertising sponsors. Eco-friendly companies are reinforcing their brand through environmental messaging on this new advertising space. New partnerships have been forged

LANDFILL DIVERSION RATE
2007 - 38% diversion
2010 - 80% diversion

and the GreenDrop Recycling Stations exhibits their environmental commitment to a growing eco-conscience consumer.

Our development of the GreenDrop Recycling Stations have more than justified their investment through reduced operating costs, increased advertising sales and fan support.

– Justin Zeulner

Director of Sustainability and Planning
for Portland Trail Blazers and Rose Garden arena

To enhance or begin your recycling/composting program, The GreenDrop Recycling Stations are a proven player when investing in facilities operations and public perception.
