RECYCLING STATION

Just Imagine Supercharging Your Recycling & Composting Program.

GreenDrop Recycling Stations® reduce landfill contributions by users easily pre-sorting compostable and recyclable items out of the landfill waste stream. This increases the sustainability of operations while being fiscally responsible by reducing expenses.

Just Imagine Becoming Sustainable.

The unique GreenDrop Recycling Station was designed through the efforts of the Portland Trail Blazers Head Office to reduce their environmental footprint while minimizing expenses and being fiscally responsible through sustainable operations. Extensive research, including a university study, took place in developing the GreenDrop Stations by observing public habits and interaction to various recycling configurations. The result was an ADA conforming, four compartment unit made of recycled plastic that allows users to send food, drinks and compostable plates, cups and utensils to a composter instead of a landfill, while separating recyclable items as well.

Just Imagine Reducing Your Operating Costs.

The Rose Garden arena increased its "diversion rate" -- the amount of waste recycled or composted -- from 38 percent in 2007 to 90 percent in 2011, in part by replacing garbage cans with GreenDrop Recycling Stations. Diverted materials often cost half as much to dispose of as garbage.

Just Imagine Increasing Your Revenue Stream.

An additional payoff was achieved with the GreenDrop Recycling Stations. They have opened up an additional advertising avenue that appeals to a supplementary segment of advertising sponsors. Eco-friendly companies are reinforcing their brand through environmental messaging on this new advertising space. New partnerships have been forged and the GreenDrop Recycling Stations exhibits their environmental commitment to a growing eco-conscience consumer.

Customized & Uniquely Effective by Design:

- Instructional graphic panels guide guests for proper sorting
- 2 and 4 bin waste streams
- ADA conforming
- 88 gallon capacity
- Consistent bin order supports faster and higher participation
- Rolling/locking wheels
- Available with 2, 3 or 4 Advertising/Display panel configurations
- 100% recyclable at end-of-life

Results:

- Environmental footprint reduced
- Ancillary revenue stream created

To enhance or begin your recycling/composting program, The GreenDrop Recycling Stations are a proven asset when investing in facilities operations and public perception.

Just Imagine Helping Create a Better World for Future Generations.

Rose Garden Arena increased its Landfill Diversion Rate from 38% in 2007 to **90%** in 2011.
