

GREENDROP LABEL INSTALLATION

Here are the supplies and materials needed to ease the application of the adhesive-backed labels onto the smooth zones of the GreenDrop waste diversion container.

Please read the entire instructions for tips.

Smooth areas indicated for labels

Items needed:

- 1) Supplied Labels
- 2) Unscented plain dish soap without added lotions
- 3) Spray bottle to hold water about 32 ounces of water and adding 2 to 3 drops of the dishwasher soap
- 4) Rubbing Alcohol or Spray bottle with Rubbing Alcohol
- 5) Clean, lint-free rags
- 6) Small Squeegee

If you have removed a prior set of adhesive labels from the unit, using Goop Off will help clean away any residual adhesive left on the unit.

Step 1

Use rubbing alcohol and a clean rag, rub

vigorously to remove any residue from the smooth zones (shown below) where you could be placing a label. You may be able to buy the alcohol in a handy spray bottle.

Step 2

Place about 32 ounces of water into a spray bottle then add 2 to 3 drops of the unscented, plain liquid dish soap without lotions. Shake for 5 seconds to mix the soap into the water.

GREENDROP LABEL INSTALLATION

Step 3

Lightly spray the water/soap mixture onto the smooth area where you will be installing the next label. The smooth area should be moist but not dripping wet with water running down the area.

Step 4

Peel back the top portion of the label leaving the majority of the label backing still intact. Line up the top of the label with the top of the smooth area and line up left side as well. Try to keep the labels even with all the smooth sides. The water solution will allow you to reposition the labels if you are slightly off balance with the smooth areas.

Step 5

Use a squeegee with a non-scratching edge to smooth air bubbles out of the label. You will achieve the best results when you push the bubbles down and to the side. If there are too many bubbles, lift the label up to the area that is satisfactory, and continue in smaller sections to adhere the labels.

These are examples of squeegees we use to apply the labels to push out air bubbles and smooth the labels.

The side of a wide rubber kitchen spatula, a teflon spatula or a shower squeegee will work. Make sure there aren't any sharp edges to scratch through the protective laminate.

Step 6

Step back and admire how nice the labels and your GreenDrop looks!
